

# **Power Relay F7**

- Pin assignment similar to ISO 7588 part 1
- **■** Customized versions on request
  - 24VDC versions with contact gap >0.8mm
  - Integrated components (e.g. resistor, diode)
  - Customized marking/color
  - Special covers (e.g. notches, release features, brackets)

### Typical applications

Cross carline up to 70A for example: ABS control, cooling fan, energy management, engine control, glow plug, heated front screen, ignition, lamps: front, rear, fog light, main switch/supply relay.

- Special high performance 24VDC version with contact gap >0.8mm.
- 2) The values apply to a resistive or inductive load with suitable spark suppression and at maximum 14VDC for 12VDC or 28VDC for 24VDC load voltages. For a load current duration of maximum 3s for a make/break ratio of 1:10.
- Current and time are compatible with circuit protection by a typical automotive fuse.
   Relay will make, carry and break the specified current.
- 4) See chapter Diagnostics of Relays in our Application Notes or consult the internet at http://relays.te.com/appnotes/
- 5) For unsuppressed relay coil. A low resistive suppression device in parallel to the relay coil increases the release time and reduces the lifetime caused by increased erosion and/or higher risk of contact tack welding.

| Coil Data          |              |
|--------------------|--------------|
| Rated coil voltage | 12VDC, 24VDC |
|                    |              |

6) Without components in parallel.

All figures are given for coil without pre-energization, at ambient temperature +23°C.

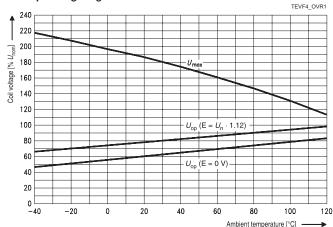

# Max. DC load breaking capacity

Load limit curve: safe shutdown, no stationary arc/make contact.

Load limit curve measured with low inductive resistors verified for 1000 switching events.

#### Coil operating range

Does not take into account the temperature rise due to the contact current  $\mathsf{E} = \mathsf{pre}\text{-energization}.$

- 7) Refers to used materials.
- No change in the switching state >1µs. Valid for NC contacts, NO contact values significantly higher.
- 9) Values apply 2mm from the end of the terminal. When the force is removed, the terminal must not have moved by more than 0.3mm.

See terminal assignment diagrams.
 Special feature: contact gap >0.8mm.

This list represents the most common types and does not show all variants covered by this datasheet.

<sup>3)</sup> Special feature: 14.5mm load terminals.

<sup>2)</sup> Special feature: contact gap >0.8mm.

<sup>4)</sup> Packed in tray with 300 pcs. per unit.

Other types on request.

<sup>3)</sup> Special feature: 14.5mm load terminals.

Other types on request.
