

# LME49720 デュアル高性能、Hi-Fiオーディオ・オペアンプ

## 1 特長

- 600Ωの負荷を容易に駆動
- オーディオ信号の優れた忠実性のため最適化
- 出力短絡保護
- 120dB (標準値)を超えるPSRRおよびCMRR
- SOIC、PDIP、TO-99 Metal Canパッケージ
- 主な仕様
  - 電源電圧範囲: ±2.5~±17V
  - THD+N ( $A_V = 1$ ,  $V_{OUT} = 3V_{RMS}$ ,  $f_{IN} = 1\text{kHz}$ ):  
 –  $R_L = 2\text{k}\Omega$ : 0.00003% (標準値)  
 –  $R_L = 600\Omega$ : 0.00003% (標準値)
  - 入力ノイズ密度:  $2.7\text{nV}/\sqrt{\text{Hz}}$  (標準値)
  - スルー・レート: ±20V/μs (標準値)
  - ゲイン帯域幅積: 55MHz (標準値)
  - 開ループ・ゲイン( $R_L = 600\Omega$ ): 140dB (標準値)
  - 入力バイアス電流: 10nA (標準値)
  - 入力オフセット電圧: 0.1mV (標準値)
  - DCゲイン直線性誤差: 0.000009%

## 2 アプリケーション

- 超高品質のオーディオ・アンプ
- Hi-Fiプリアンプ
- Hi-Fiマルチメディア
- 最先端のフォノ・プリアンプ
- プロフェッショナル用高性能オーディオ
- Hi-Fiイコライゼーションおよびクロスオーバー・ネットワーク
- 高性能ライン・ドライバ
- 高性能ライン・レシーバ
- Hi-Fiアクティブ・フィルタ

## 3 概要

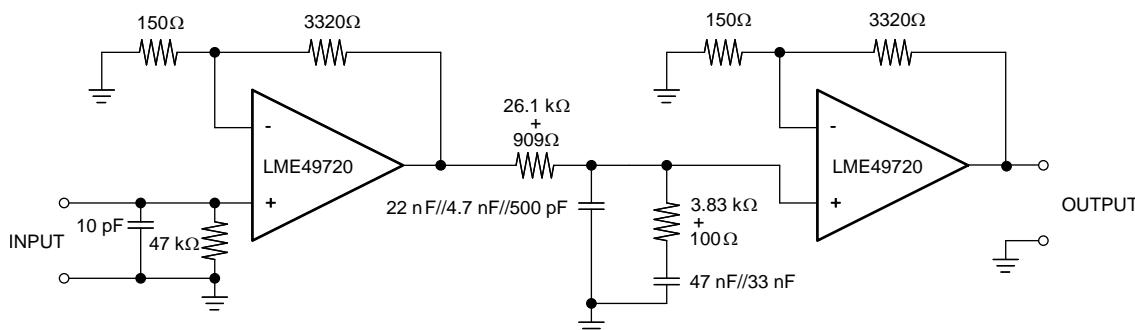

LME49720デバイスは超低歪み、低ノイズ、高スルーレートのオペアンプ・シリーズの製品であり、高性能のHi-Fiアプリケーション用に最適化され、完全に規定されています。高度な最新のプロセス・テクノロジと、最先端の回路設計との組み合わせにより、LME49720オーディオ・オペアンプ・ドライバは優れたオーディオ信号アンプとして、比類のないオーディオ性能を実現します。LME49720は、非常に低い電圧ノイズ密度( $2.7\text{nV}/\sqrt{\text{Hz}}$ )と、ほぼ無視できるTHD+N (0.00003%)との両立により、最も厳しいオーディオ・アプリケーションの要求も容易に満たすことができます。

### 製品情報<sup>(1)</sup>

型番	パッケージ	本体サイズ(公称)
LME49720	TO-99 (8)	9.08mm×9.08mm
	SOIC (8)	4.90mm×3.91mm
	PDIP (8)	9.81mm×6.35mm

(1) 提供されているすべてのパッケージについては、データシートの末尾にある注文情報を参照してください。

### パッシブ・イコライゼーションのRIAAフォノ・プリアンプ

Note: 1% metal film resistors, 5% polypropylene capacitors

LME49723	オーディオ・オペアンプ	2	25	3.2	0.0002

## 6 Pin Configuration and Functions

### Pin Functions

PIN				I/O	DESCRIPTION
NAME	SOIC	PDIP	TO-99		
V+	8	8	8	-	Positive supply voltage
V-	4	4	4	-	Negative supply voltage
InputA-	2	2	2	I	Negative audio input
InputA+	3	3	3	I	Positive audio input
Output A	1	1	1	O	Audio output A
InputB-	6	6	6	I	Negative audio input
InputB+	5	5	5	I	Positive audio input
Output B	7	7	7	O	Audio output B

## 7 Specifications

### 7.1 Absolute Maximum Ratings

see <sup>(1)(2)(3)</sup>

		MIN	MAX	UNIT
Power Supply Voltage	( $V_S = V^+ - V^-$ )		36	V
Input Voltage		( $V^- - 0.7V$ )	( $V^+ + 0.7V$ )	V
Output Short Circuit <sup>(4)</sup>		Continuous		
Power Dissipation		Internally Limited		
Junction Temperature			150	°C
Temperature Range	$T_{MIN} \leq T_A \leq T_{MAX}$	-40	85	°C
Supply Voltage Range		$\pm 2.5V \leq V_S \leq \pm 17V$		V
Storage Temperature		-65	150	°C

- (1) Absolute Maximum Ratings indicate limits beyond which damage to the device may occur.
- (2) Operating Ratings indicate conditions for which the device is functional, but do not ensure specific performance limits. For ensured specifications and test conditions, see Electrical Characteristics. The ensured specifications apply only for the test conditions listed. Some performance characteristics may degrade when the device is not operated under the listed test conditions.
- (3) If Military/Aerospace specified devices are required, please contact the Texas Instruments Sales Office/ Distributors for availability and specifications.
- (4) Amplifier output connected to GND, any number of amplifiers within a package.

### 7.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM) <sup>(1)</sup>	All pins	V
		Machine Model (MM), per EIAJ IC-121-1981 <i>Application and Implementation</i>	Pins 1, 4, 7 and 8	
			Pins 2, 3, 5 and 6	

- (1) Human body model, 100pF discharged through a 1.5kΩ resistor.

### 7.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
$V_+, V_-$	Supply voltage	$\pm 2.5$		$\pm 17$	V
$T_A$	Operating free-air temperature	-40	85		°C
$T_J$	Operating junction temperature	-40		150	°C

### 7.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>	LME49720			UNIT	
	D (SOIC)	P (PDIP)	LMC (TO-99) <sup>(2)</sup>		
	8 PINS	8 PINS	8 PINS		
$R_{QJA}$	Junction-to-ambient thermal resistance	107.9	72.9	150	°C/W
$R_{QJC(top)}$	Junction-to-case (top) thermal resistance	52	77.2	35	°C/W
$R_{QJB}$	Junction-to-board thermal resistance	48.3	44.9	–	°C/W
$\Psi_{JT}$	Junction-to-top characterization parameter	8.2	35.7	–	°C/W
$\Psi_{JB}$	Junction-to-board characterization parameter	47.8	49.9	–	°C/W
$R_{QJC(bot)}$	Junction-to-case (bottom) thermal resistance	N/A	N/A	–	°C/W

- (1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report.
- (2) Thermal performance of a TO-99 package will depend strongly on mounting condition and there is no standard mounting configuration on a JEDEC PCB for that package type.

## 7.5 Electrical Characteristics

The following specifications apply for  $V_S = \pm 15V$ ,  $R_L = 2k\Omega$ ,  $f_{IN} = 1kHz$ , and  $T_A = 25^\circ C$ , unless otherwise specified.

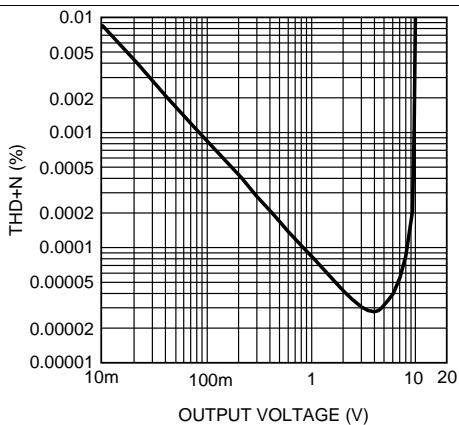

PARAMETER	TEST CONDITIONS	MIN <sup>(1)</sup>	TYP <sup>(2)</sup>	MAX <sup>(1)</sup>	UNIT
THD+N	Total harmonic distortion + noise $A_V = 1$ , $V_{OUT} = 3V_{rms}$ $R_L = 2k\Omega$ $R_L = 600\Omega$		0.00003 0.00003	0.00009	%
IMD	Intermodulation distortion $A_V = 1$ , $V_{OUT} = 3V_{RMS}$ Two-tone, 60Hz & 7kHz 4:1		0.00005		%
GBWP	Gain bandwidth product	45	55		MHz
SR	Slew rate	$\pm 15$	$\pm 20$		V/ $\mu$ s
FPBW	Full power bandwidth $V_{OUT} = 1V_{P-P}$ , -3dB referenced to output magnitude at $f = 1kHz$		10		MHz
$t_s$	Settling time $A_V = -1$ , 10V step, $C_L = 100pF$ 0.1% error range		1.2		$\mu$ s
$e_n$	Equivalent input noise voltage $f_{BW} = 20Hz$ to $20kHz$		0.34	0.65	$\mu V_{RMS}$
	Equivalent input noise density $f = 1kHz$ $f = 10Hz$		2.7 6.4	4.7	nV/ $\sqrt{Hz}$
$i_n$	Current noise density $f = 1kHz$ $f = 10Hz$		1.6 3.1		pA/ $\sqrt{Hz}$
$V_{OS}$	Offset voltage		$\pm 0.1$	$\pm 0.7$	mV
$\Delta V_{OS}/\Delta T_{mp}$	Average input offset voltage drift vs temperature $-40^\circ C \leq T_A \leq 85^\circ C$		0.2		$\mu V/^{\circ}C$
PSRR	Average input offset voltage shift vs power supply voltage $\Delta V_S = 20V$ <sup>(3)</sup>	110	120		dB
$ISO_{CH-CH}$	Channel-to-Channel isolation $f_{IN} = 1kHz$ $f_{IN} = 20kHz$		118 112		dB
$I_B$	Input bias current $V_{CM} = 0V$		10	72	nA
$\Delta I_{OS}/\Delta T_{mp}$	Input bias current drift vs temperature $-40^\circ C \leq T_A \leq 85^\circ C$		0.1		nA/ $^{\circ}C$
$I_{OS}$	Input offset current $V_{CM} = 0V$		11	65	nA
$V_{IN-CM}$	Common-Mode input voltage range	$(V+) - 2.0$ $(V-) + 2.0$	+14.1 -13.9		V
CMRR	Common-Mode rejection $-10V < V_{cm} < 10V$	110	120		dB
$Z_{IN}$	Differential input impedance		30		k $\Omega$
	Common mode input impedance $-10V < V_{cm} < 10V$		1000		M $\Omega$
$A_{VOL}$	Open loop voltage gain $-10V < V_{out} < 10V$ , $R_L = 600\Omega$ $-10V < V_{out} < 10V$ , $R_L = 2k\Omega$ $-10V < V_{out} < 10V$ , $R_L = 10k\Omega$	125	140		dB
		140			
		140			
$V_{OUTMAX}$	Maximum output voltage swing $R_L = 600\Omega$ $R_L = 2k\Omega$ $R_L = 10k\Omega$	$\pm 12.5$	$\pm 13.6$		V
			$\pm 14.0$		
			$\pm 14.1$		
$I_{OUT}$	Output current $R_L = 600\Omega$ , $V_S = \pm 17V$	$\pm 23$	$\pm 26$		mA
$I_{OUT-CC}$	Instantaneous short circuit current		+53 -42		mA
$R_{OUT}$	Output impedance $f_{IN} = 10kHz$ Closed-Loop Open-Loop		0.01 13		$\Omega$
$C_{LOAD}$	Capacitive load drive overshoot 100pF		16		%
$I_S$	Total quiescent current $I_{OUT} = 0mA$		10 12		mA

(1) Tested limits are ensured to AOQL (Average Outgoing Quality Level).

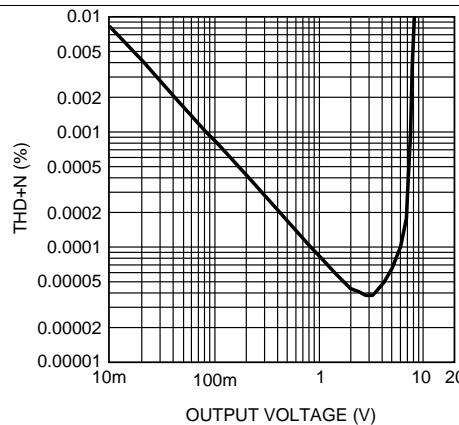

(2) Typical specifications are specified at  $+25^\circ C$  and represent the most likely parametric norm.

(3) PSRR is measured as follows:  $V_{OS}$  is measured at two supply voltages,  $\pm 5V$  and  $\pm 15V$ .  $PSRR = |20\log(\Delta V_{OS}/\Delta V_S)|$ .

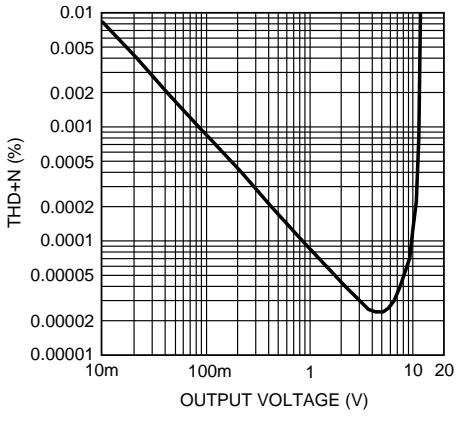

## 7.6 Typical Characteristics

## 8 Parameter Measurement Information

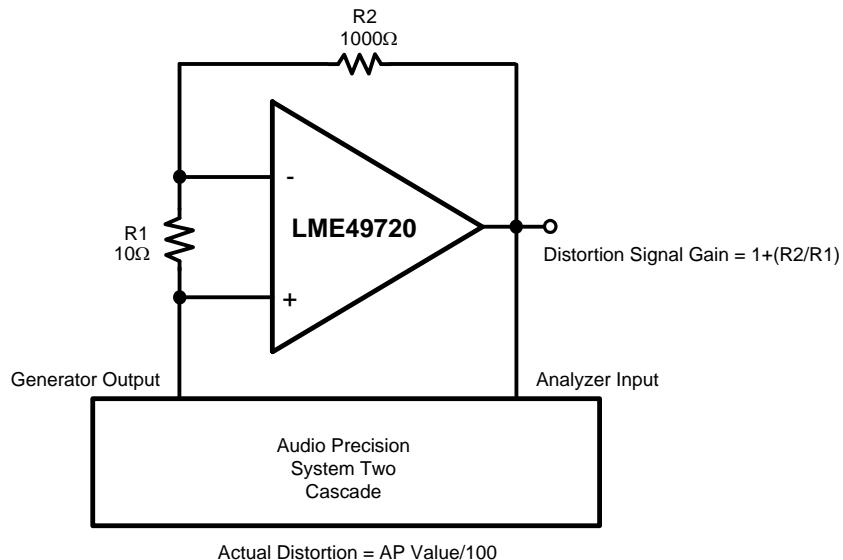

All parameters are measured according to the conditions described in the *Specifications* section.

### 8.1 Distortion Measurements

The vanishingly low residual distortion produced by LME49720 is below the capabilities of all commercially available equipment. This makes distortion measurements just slightly more difficult than simply connecting a distortion meter to the amplifier's inputs and outputs. The solution, however, is quite simple: an additional resistor. Adding this resistor extends the resolution of the distortion measurement equipment.

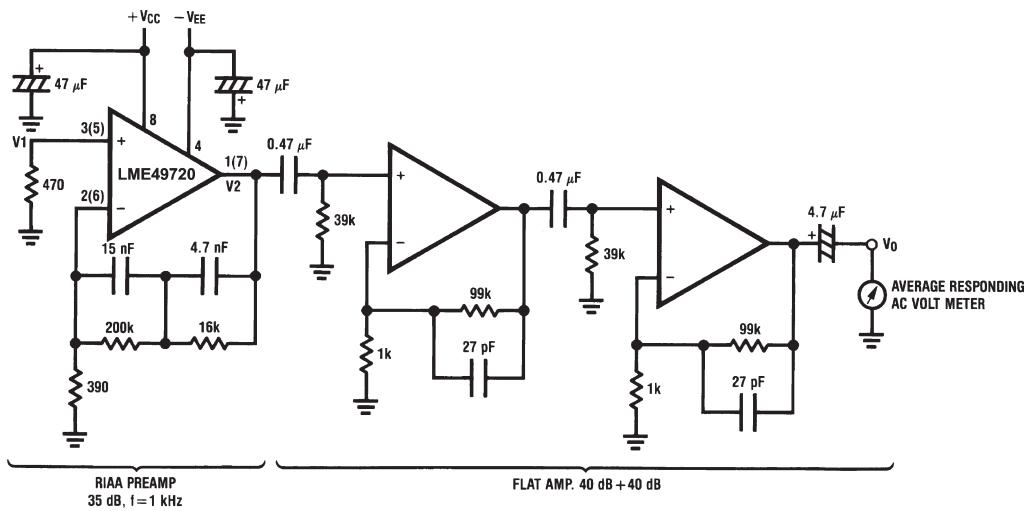

The LME49720's low residual distortion is an input referred internal error. As shown in Figure 109, adding the  $10\Omega$  resistor connected between the amplifier's inverting and non-inverting inputs changes the amplifier's noise gain. The result is that the error signal (distortion) is amplified by a factor of 101. Although the amplifier's closed-loop gain is unaltered, the feedback available to correct distortion errors is reduced by 101, which means that measurement resolution increases by 101. To ensure minimum effects on distortion measurements, keep the value of R1 low as shown in Figure 109.

This technique is verified by duplicating the measurements with high closed loop gain and/or making the measurements at high frequencies. Doing so produces distortion components that are within the measurement equipment's capabilities. This datasheet's THD+N and IMD values were generated using the above described circuit connected to an Audio Precision System Two Cascade.

**Figure 109. THD+N and IMD Distortion Test Circuit**

## Distortion Measurements (continued)

Complete shielding is required to prevent induced pick up from external sources. Always check with oscilloscope for power line noise.

Total Gain: 115 dB @ F = 1 kHz

Input Referred Noise Voltage:  $E_n = V_0 / 560,000$  (V)

**Figure 110. Noise Measurement Circuit**

## 9 Detailed Description

### 9.1 Overview

The LME49720 audio operational amplifier delivers superior audio signal amplification for outstanding audio performance.

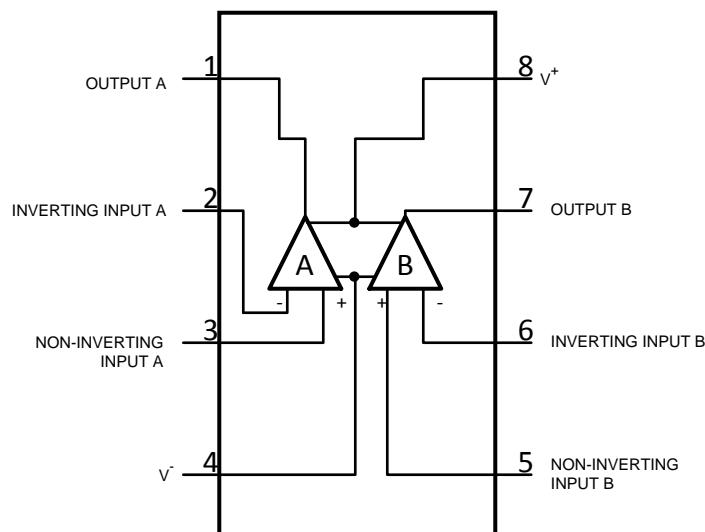

To ensure that the most challenging loads are driven without compromise, the LME49720 has a high slew rate of  $\pm 20\text{V}/\mu\text{s}$  and an output current capability of  $\pm 26\text{mA}$ . Further, dynamic range is maximized by an output stage that drives  $2\text{k}\Omega$  loads to within 1V of either power supply voltage and to within 1.4V when driving  $600\Omega$  loads.

The LME49720's outstanding CMRR (120dB), PSRR (120dB), and  $V_{OS}$  (0.1mV) give the amplifier excellent operational amplifier DC performance.

The LME49720 has a wide supply range of  $\pm 2.5\text{V}$  to  $\pm 17\text{V}$ . Over this supply range the LME49720's input circuitry maintains excellent common-mode and power supply rejection, as well as maintaining its low input bias current. The LME49720 is unity gain stable. This Audio Operational Amplifier achieves outstanding AC performance while driving complex loads with values as high as  $100\text{pF}$ .

The LME49720 is available in 8-lead narrow body SOIC, 8-lead PDIP, and 8-lead TO-99. Demonstration boards are available for each package.

### 9.2 Functional Block Diagram

### 9.3 Feature Description

#### 9.3.1 Capacitive Load

The LME49720 is a high speed op amp with excellent phase margin and stability. Capacitive loads up to  $100\text{pF}$  will cause little change in the phase characteristics of the amplifiers and are therefore allowable.

Capacitive loads greater than  $100\text{pF}$  must be isolated from the output. The most straightforward way to do this is to put a resistor in series with the output. This resistor will also prevent excess power dissipation if the output is accidentally shorted.

#### 9.3.2 Balance Cable Driver

With high peak-to-peak differential output voltage and plenty of low distortion drive current, the LME49720 makes an excellent balanced cable driver. Combining the single-to-differential configuration with a balanced cable driver results in a high performance single-ended input to balanced line driver solution.

Although the LME49720 can drive capacitive loads up to  $100\text{pF}$ , cable loads exceeding  $100\text{pF}$  can cause instability. For such applications, series resistors are needed on the outputs before the capacitive load.

## 9.4 Device Functional Modes

This device does not have operation mode.

## 10 Application and Implementation

### NOTE

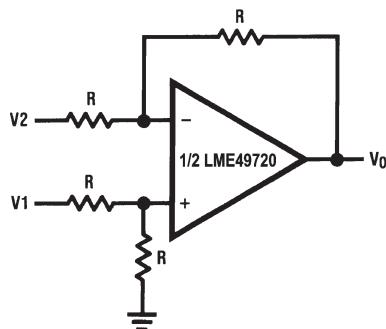

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 10.1 Application Information

These typical connection diagrams highlight the required external components and system level connections for proper operation of the device. Any design variation can be supported by TI through schematic and layout reviews. Visit [e2e.ti.com](http://e2e.ti.com) for design assistance and join the audio amplifier discussion forum for additional information

### 10.2 Typical Applications

#### 10.2.1 Single Ended Converter

$$V_O = V_1 - V_2$$

**Figure 111. Balanced To Single Ended Converter**

##### 10.2.1.1 Design Requirements

For this design example, use the parameters listed in [Table 1](#).

**Table 1. Design Parameters**

DESIGN PARAMETER	EXAMPLE VALUE
Power Supply	$\pm 15$
Speaker	2 K $\Omega$

### 10.2.1.2 Detailed Design Procedure

#### 10.2.1.2.1 Surface Mount Capacitors

Temperature and applied DC voltage influence the actual capacitance of high-K materials. [Table 2](#) shows the relationship between the different types of high-K materials and their associated tolerances, temperature coefficients, and temperature ranges. Notice that a capacitor made with X5R material can lose up to 15% of its capacitance within its working temperature range.

Select high-K ceramic capacitors according to the following rules:

1. Use capacitors made of materials with temperature coefficients of X5R, X7R, or better.
2. Use capacitors with DC voltage ratings of at least twice the application voltage.
3. Choose a capacitance value at least twice the nominal value calculated for the application.

Multiply the nominal value by a factor of 2 for safety. If a 10- $\mu\text{F}$  capacitor is required, use 20 $\mu\text{F}$ .

The preceding rules and recommendations apply to capacitors used in connection with this device. The LME49720 cannot meet its performance specifications if the rules and recommendations are not followed.

**Table 2. Typical Tolerance and Temperature Coefficient of Capacitance by Material**

Material	COG/NPO	X7R	X5R
Typical Tolerance	$\pm 5\%$	$\pm 10\%$	80–20%
Temperature	$\pm 30\text{ppm}$	$\pm 15\%$	22–82%
Temperature Range, °C	–55/125°C	–55/125°C	–30/85 °C

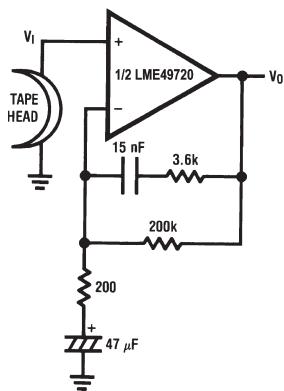

#### 10.2.1.3 Application Curves

For application curves, see the figures listed in [Table 3](#).

## 11 Power Supply Recommendations

The LME49720 is designed to operate a power supply from  $\pm 2.5V$  to  $\pm 17V$ . Therefore, the output voltage range of the power supply must be within this range. The current capability of upper power must not exceed the maximum current limit of the power switch.

### 11.1 Power Supply Decoupling Capacitors

The LME49720 requires adequate power supply decoupling to ensure a low total harmonic distortion (THD). Place a low equivalent-series-resistance (ESR) ceramic capacitor, typically  $0.1 \mu F$ , within 2 mm of the V+ and V- pins. This choice of capacitor and placement helps with higher frequency transients, spikes, or digital hash on the line. In addition to the  $0.1 \mu F$  ceramic capacitor, it is recommended to place a  $2.2 \mu F$  to  $10 \mu F$  capacitor on the V+ and V- pins. This larger capacitor acts as a charge reservoir, providing energy faster than the board supply, thus helping to prevent any droop in the supply voltage.

## 12 Layout

### 12.1 Layout Guidelines

#### 12.1.1 Component Placement

Place all the external components close to the device. Placing the decoupling capacitors as close as possible to the device is important for low total harmonic distortion (THD). Any resistance or inductance in the trace between the device and the capacitor can cause a loss in efficiency.

## 14 メカニカル、パッケージ、および注文情報

以降のページには、メカニカル、パッケージ、および注文に関する情報が記載されています。この情報は、そのデバイスについて利用可能な最新のデータです。このデータは予告なく変更されることがあります。ドキュメントが改訂される場合もあります。本データシートのブラウザ版を使用されている場合は、画面左側の説明をご覧ください。

**PACKAGING INFORMATION**

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
LME49720MAX/NOPB	ACTIVE	SOIC	D	8	2500	Green (RoHS & no Sb/Br)	SN	Level-1-260C-UNLIM	-40 to 85	L49720 MA	Samples
LME49720NA/NOPB	ACTIVE	PDIP	P	8	40	Green (RoHS & no Sb/Br)	SN	Level-1-NA-UNLIM	-40 to 85	LME 49720NA	Samples

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## PACKAGE OPTION ADDENDUM

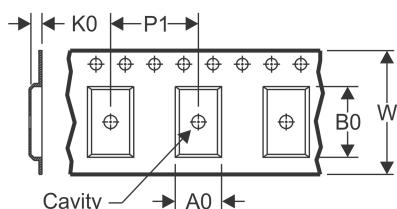

6-Feb-2020

## TAPE AND REEL INFORMATION

### REEL DIMENSIONS

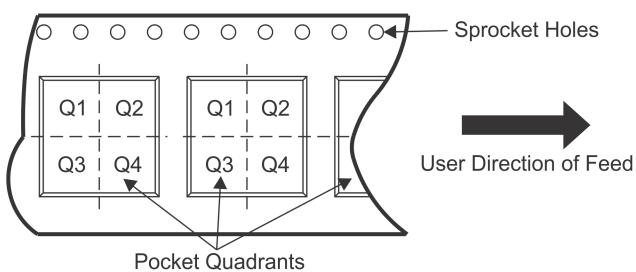

### TAPE DIMENSIONS

A0	Dimension designed to accommodate the component width
B0	Dimension designed to accommodate the component length
K0	Dimension designed to accommodate the component thickness
W	Overall width of the carrier tape
P1	Pitch between successive cavity centers

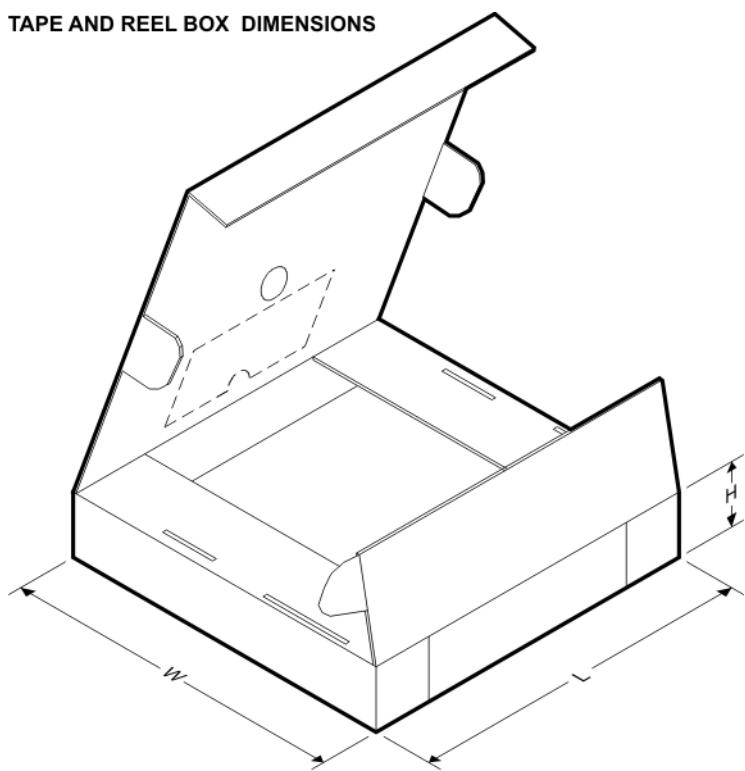

### QUADRANT ASSIGNMENTS FOR PIN 1 ORIENTATION IN TAPE

\*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Reel Diameter (mm)	Reel Width W1 (mm)	A0 (mm)	B0 (mm)	K0 (mm)	P1 (mm)	W (mm)	Pin1 Quadrant
LME49720MAX/NOPB	SOIC	D	8	2500	330.0	12.4	6.5	5.4	2.0	8.0	12.0	Q1

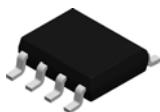

## TAPE AND REEL BOX DIMENSIONS

\*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Length (mm)	Width (mm)	Height (mm)
LME49720MAX/NOPB	SOIC	D	8	2500	367.0	367.0	35.0

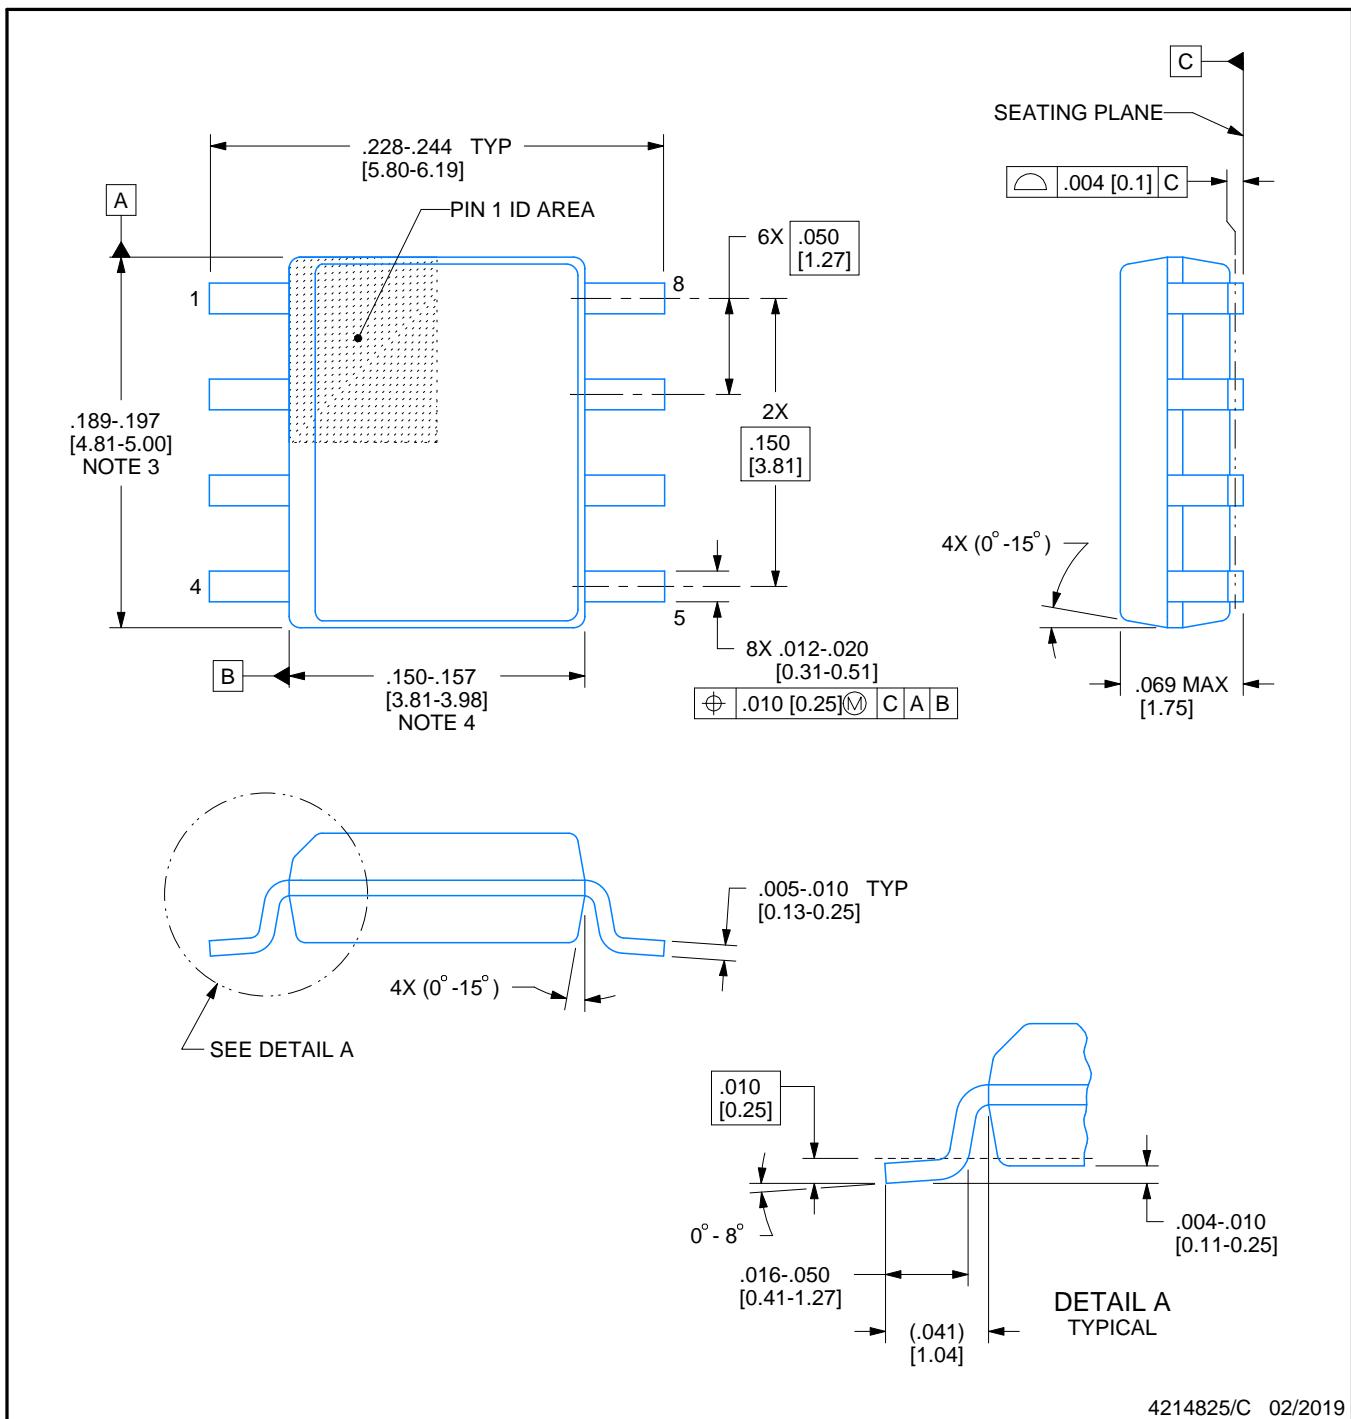

D0008A

# PACKAGE OUTLINE

## SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

### NOTES:

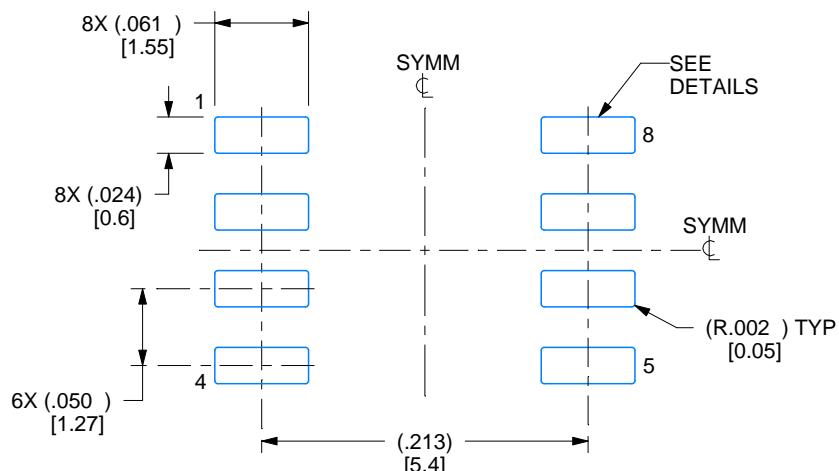

- Linear dimensions are in inches [millimeters]. Dimensions in parenthesis are for reference only. Controlling dimensions are in inches. Dimensioning and tolerancing per ASME Y14.5M.
- This drawing is subject to change without notice.
- This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed .006 [0.15] per side.
- This dimension does not include interlead flash.
- Reference JEDEC registration MS-012, variation AA.

# EXAMPLE BOARD LAYOUT

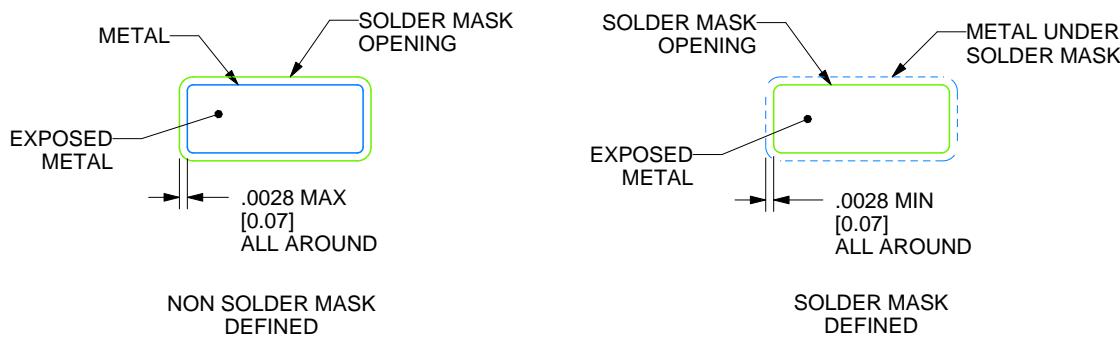

D0008A

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

LAND PATTERN EXAMPLE  
EXPOSED METAL SHOWN  
SCALE:8X

SOLDER MASK DETAILS

4214825/C 02/2019

NOTES: (continued)

6. Publication IPC-7351 may have alternate designs.

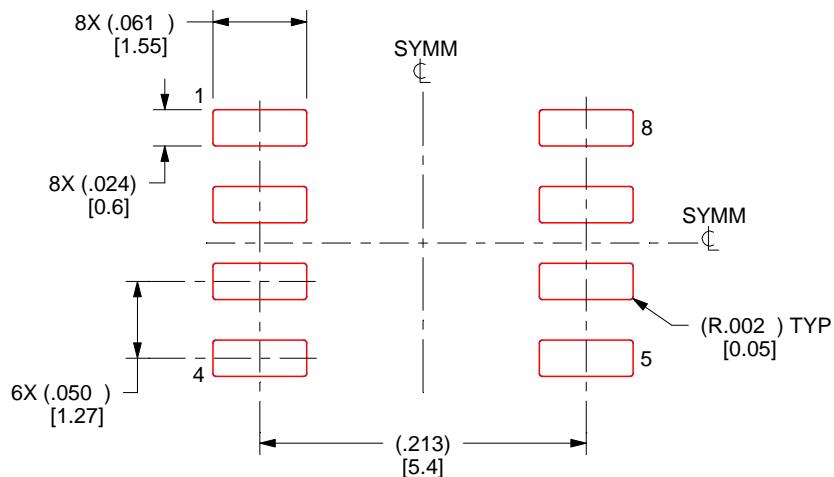

7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

# EXAMPLE STENCIL DESIGN

D0008A

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

SOLDER PASTE EXAMPLE  
BASED ON .005 INCH [0.125 MM] THICK STENCIL  
SCALE:8X

4214825/C 02/2019

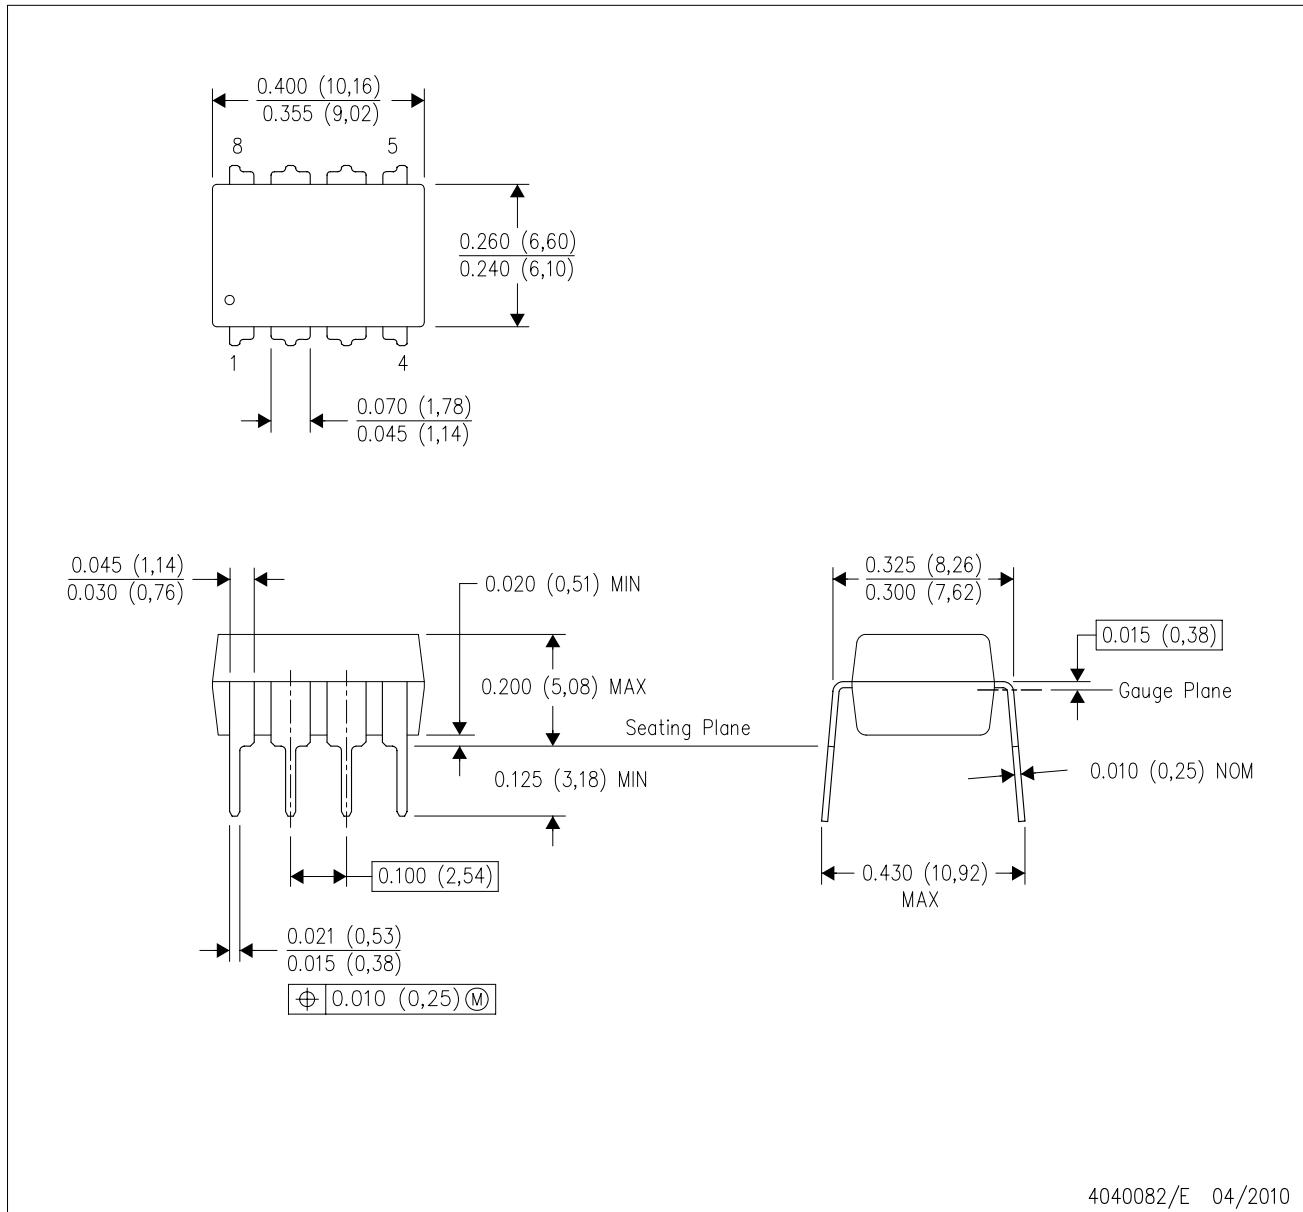

NOTES: (continued)

8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
9. Board assembly site may have different recommendations for stencil design.

## MECHANICAL DATA

P (R-PDIP-T8)

PLASTIC DUAL-IN-LINE PACKAGE

4040082/E 04/2010

- NOTES:
- All linear dimensions are in inches (millimeters).
  - This drawing is subject to change without notice.
  - Falls within JEDEC MS-001 variation BA.

## 重要なお知らせと免責事項

TI は、技術データと信頼性データ(データシートを含みます)、設計リソース(リファレンス・デザインを含みます)、アプリケーションや設計に関する各種アドバイス、Web ツール、安全性情報、その他のリソースを、欠陥が存在する可能性のある「現状のまま」提供しており、商品性および特定目的に対する適合性の默示保証、第三者の知的財産権の非侵害保証を含むいかなる保証も、明示的または默示的にかかわらず拒否します。
