## DESCRIPTION

The LM336-2.5/5.0 integrated circuits are precision  $2.5V$  and  $5.0V$  shunt regulator diodes. Monolithic IC LM336-2.5 voltage references operate as a low temperature coefficient  $2.5V$  Zener with  $0.2\Omega$  dynamic impedance. Monolithic IC LM336-5.0 voltage references operate as a low temperature coefficient  $5V$  Zener with  $0.6\Omega$  dynamic impedance. A third terminal on the LM336 allows the reference voltage and temperature coefficient to be trimmed easily.

The LM336 series is useful as a precision low voltage reference for digital voltmeters, power supplies or op amp circuitry. The  $2.5V$  and  $5.0V$  make it convenient to obtain a stable reference from low voltage supplies. Further, since the LM336-2.5/5.0 operates as a shunt regulator, it can be used as either a positive or negative voltage reference.

The LM336 is rated for operation over a  $0^{\circ}C$  to  $70^{\circ}C$  temperature range. See the connection diagrams for available packages.

Note 2. Temperature stability for LM336 family is specified by design. Design limits are ensured (but not 100% production tested) over the indicated temperature and supply voltage ranges. Stability is defined as the maximum change in  $V_{REF}$  from  $25^\circ\text{C}$  to  $T_A$  (min) or  $T_A$  (max).
