Features

- High-performance, Low-power AVR® 8-bit Microcontroller
- RISC Architecture
  - 118 Powerful Instructions – Most Single Clock Cycle Execution
  - 32 x 8 General Purpose Working Registers
  - Fully Static Operation
  - Up to 16 MIPS Throughput at 16 MHz
- Data and Non-volatile Program Memory
  - 2K Bytes of In-System Programmable Program Memory Flash
    Endurance: 10,000 Write/Erase Cycles
  - 128 Bytes of In-System Programmable EEPROM
    Endurance: 100,000 Write/Erase Cycles
  - 128 Bytes Internal SRAM
  - Programming Lock for Flash Program and EEPROM Data Security
- Peripheral Features
  - 8-bit Timer/Counter with Separate Prescaler
  - 8-bit High-speed Timer with Separate Prescaler
    2 High Frequency PWM Outputs with Separate Output Compare Registers
    Non-overlapping Inverted PWM Output Pins
  - Universal Serial Interface with Start Condition Detector
  - 10-bit ADC
    11 Single Ended Channels
    8 Differential ADC Channels
    7 Differential ADC Channel Pairs with Programmable Gain (1x, 20x)
  - On-chip Analog Comparator
  - External Interrupt
  - Pin Change Interrupt on 11 Pins
  - Programmable Watchdog Timer with Separate On-chip Oscillator
- Special Microcontroller Features
  - Low Power Idle, Noise Reduction, and Power-down Modes
  - Power-on Reset and Programmable Brown-out Detection
  - External and Internal Interrupt Sources
  - In-System Programmable via SPI Port
  - Internal Calibrated RC Oscillator
- I/O and Packages
  - 20-lead PDIP/SOIC: 16 Programmable I/O Lines
  - 32-lead QFN/MLF: 16 programmable I/O Lines
- Operating Voltages
  - 2.7V - 5.5V for ATtiny26L
  - 4.5V - 5.5V for ATtiny26
- Speed Grades
  - 0 - 8 MHz for ATtiny26L
  - 0 - 16 MHz for ATtiny26
- Power Consumption at 1 MHz, 3V and 25°C for ATtiny26L
  - Active 16 MHz, 5V and 25°C: Typ 15 mA
  - Active 1 MHz, 3V and 25°C: 0.70 mA
  - Idle Mode 1 MHz, 3V and 25°C: 0.18 mA
  - Power-down Mode: < 1 µA

8-bit AVR® Microcontroller with 2K Bytes Flash

ATtiny26
ATtiny26L

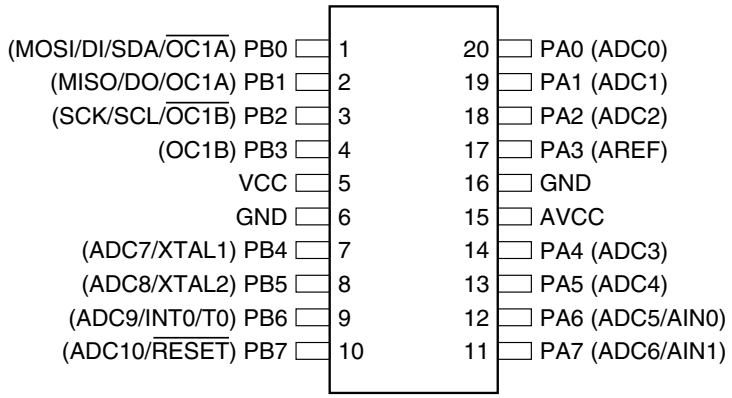
Summary

1477HS–AVR–04/06

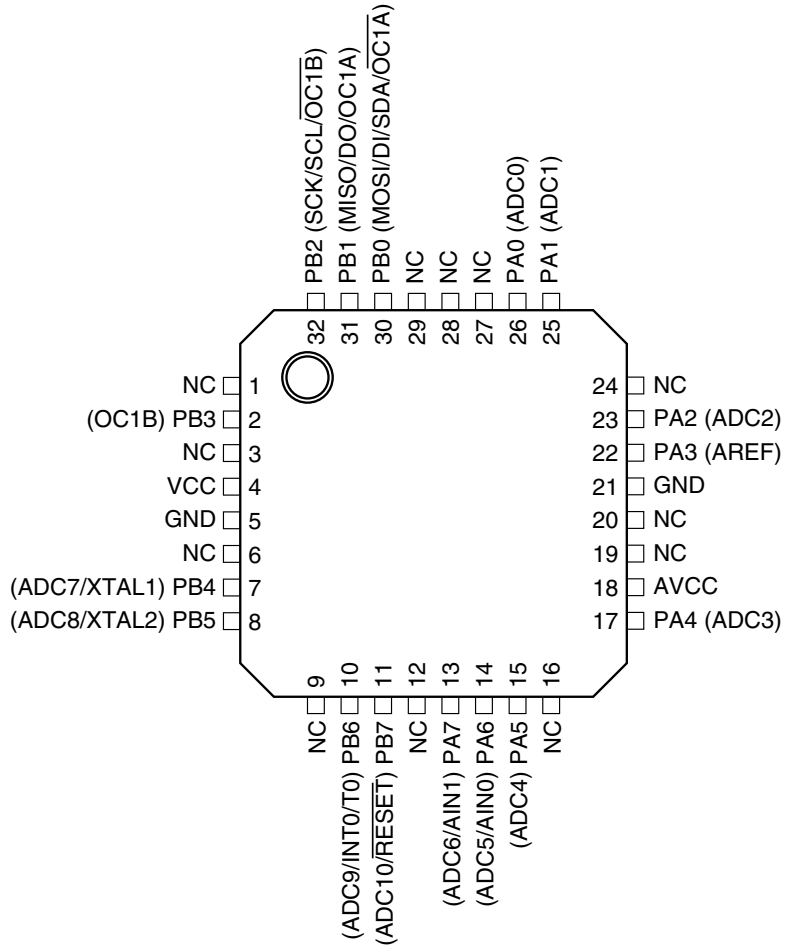
Note: This is a summary document. A complete document is available on our Web site at www.atmel.com.

Pin Configuration

PDIP/SOIC



MLF Top View



Note: Note: The bottom pad under the QFN/MLF package should be soldered to ground.

Description

The ATtiny26(L) is a low-power CMOS 8-bit microcontroller based on the *AVR* enhanced RISC architecture. By executing powerful instructions in a single clock cycle, the ATtiny26(L) achieves throughputs approaching 1 MIPS per MHz allowing the system designer to optimize power consumption versus processing speed.

The AVR core combines a rich instruction set with 32 general purpose working registers. All the 32 registers are directly connected to the Arithmetic Logic Unit (ALU), allowing two independent registers to be accessed in one single instruction executed in one clock cycle. The resulting architecture is more code efficient while achieving throughputs up to ten times faster than conventional CISC microcontrollers. The ATtiny26(L) has a high precision ADC with up to 11 single ended channels and 8 differential channels. Seven differential channels have an optional gain of 20x. Four out of the seven differential channels, which have the optional gain, can be used at the same time. The ATtiny26(L) also has a high frequency 8-bit PWM module with two independent outputs. Two of the PWM outputs have inverted non-overlapping output pins ideal for synchronous rectification. The Universal Serial Interface of the ATtiny26(L) allows efficient software implementation of TWI (Two-wire Serial Interface) or SM-bus interface. These features allow for highly integrated battery charger and lighting ballast applications, low-end thermostats, and firedetectors, among other applications.

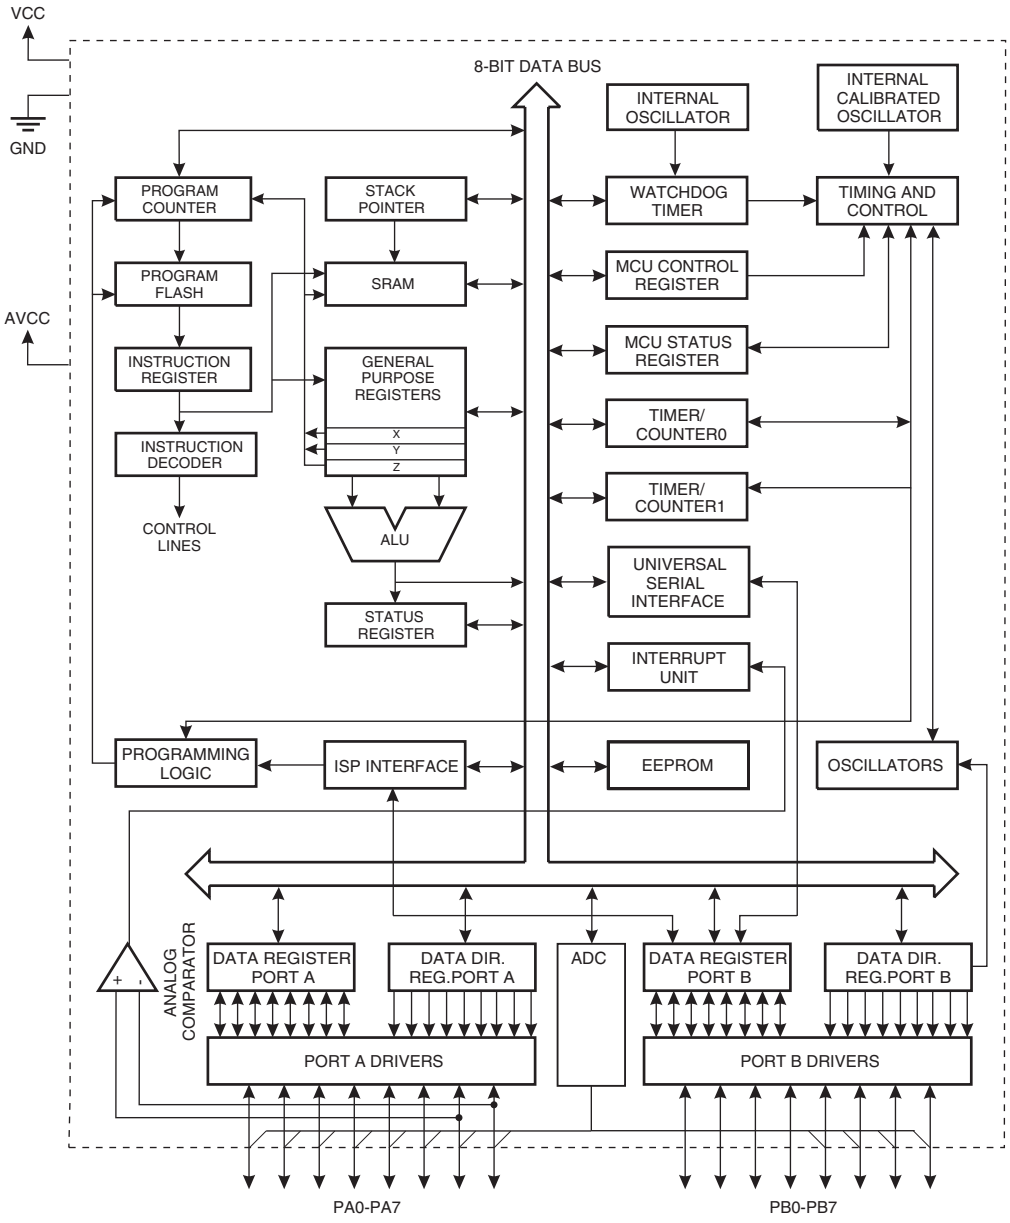
The ATtiny26(L) provides 2K bytes of Flash, 128 bytes EEPROM, 128 bytes SRAM, up to 16 general purpose I/O lines, 32 general purpose working registers, two 8-bit Timer/Counters, one with PWM outputs, internal and external Oscillators, internal and external interrupts, programmable Watchdog Timer, 11-channel, 10-bit Analog to Digital Converter with two differential voltage input gain stages, and four software selectable power saving modes. The Idle mode stops the CPU while allowing the Timer/Counters and interrupt system to continue functioning. The ATtiny26(L) also has a dedicated ADC Noise Reduction mode for reducing the noise in ADC conversion. In this sleep mode, only the ADC is functioning. The Power-down mode saves the register contents but freezes the oscillators, disabling all other chip functions until the next interrupt or hardware reset. The Standby mode is the same as the Power-down mode, but external oscillators are enabled. The wakeup or interrupt on pin change features enable the ATtiny26(L) to be highly responsive to external events, still featuring the lowest power consumption while in the Power-down mode.

The device is manufactured using Atmel's high density non-volatile memory technology. By combining an enhanced RISC 8-bit CPU with Flash on a monolithic chip, the ATtiny26(L) is a powerful microcontroller that provides a highly flexible and cost effective solution to many embedded control applications.

The ATtiny26(L) AVR is supported with a full suite of program and system development tools including: Macro assemblers, program debugger/simulators, In-circuit emulators, and evaluation kits.

Block Diagram

Figure 1. The ATtiny26(L) Block Diagram



Pin Descriptions

VCC Digital supply voltage pin.

GND Digital ground pin.

AVCC AVCC is the supply voltage pin for Port A and the A/D Converter (ADC). It should be externally connected to V_{CC}, even if the ADC is not used. If the ADC is used, it should be connected to V_{CC} through a low-pass filter. See page 94 for details on operating of the ADC.

Port A (PA7..PA0) Port A is an 8-bit general purpose I/O port. PA7..PA0 are all I/O pins that can provide internal pull-ups (selected for each bit). Port A has alternate functions as analog inputs for the ADC and analog comparator and pin change interrupt as described in “Alternate Port Functions” on page 46.

Port B (PB7..PB0) Port B is an 8-bit general purpose I/O port. PB6..0 are all I/O pins that can provide internal pull-ups (selected for each bit). PB7 is an I/O pin if not used as the reset. To use pin PB7 as an I/O pin, instead of RESET pin, program (“0”) RSTDISBL Fuse. Port B has alternate functions for the ADC, clocking, timer counters, USI, SPI programming, and pin change interrupt as described in “Alternate Port Functions” on page 46.

An External Reset is generated by a low level on the PB7/$\overline{\text{RESET}}$ pin. Reset pulses longer than 50 ns will generate a reset, even if the clock is not running. Shorter pulses are not guaranteed to generate a reset.

XTAL1 Input to the inverting oscillator amplifier and input to the internal clock operating circuit.

XTAL2 Output from the inverting oscillator amplifier.

Register Summary

e	0.050 BSC			

Notes:
1. This drawing is for general information only; refer to JEDEC Drawing MS-013, Variation AC for additional information.
2. Dimension "D" does not include mold Flash, protrusions or gate burrs. Mold Flash, protrusions and gate burrs shall not exceed 0.15 mm (0.006") per side.
3. Dimension "E" does not include inter-lead Flash or protrusion. Inter-lead Flash and protrusions shall not exceed 0.25 mm (0.010") per side.
4. "L" is the length of the terminal for soldering to a substrate.
5. The lead width "b", as measured 0.36 mm (0.014") or greater above the seating plane, shall not exceed a maximum value of 0.61 mm (0.024") per side.

Datasheet Revision History

Please note that the referring page numbers in this section are referred to this document. The referring revision in this section are referring to the document revision.

Changes from Rev. 1477G-03/05 to Rev. 1477H-04/06

1. **Updated typos.**
2. **Added “Resources” on page 6.**
3. **Updated features in “System Control and Reset” on page 33.**
4. **Updated “Prescaling and Conversion Timing” on page 98.**
5. **Updated algorithm for “Enter Programming Mode” on page 114.**

Changes from Rev. 1477F-12/04 to Rev. 1477G-03/05

1. **MLF-package alternative changed to “Quad Flat No-Lead/Micro Lead Frame Package QFN/MLF”.**
2. **Updated “Electrical Characteristics” on page 126**
3. **Updated “Ordering Information” on page 9**

Changes from Rev. 1477E-10/03 to Rev. 1477F-12/04

1. **Updated Table 16 on page 32, Table 9 on page 27, and Table 29 on page 57.**
2. **Added Table 20 on page 39.**
3. **Added “Changing Channel or Reference Selection” on page 98.**
4. **Updated “Offset Compensation Schemes” on page 105.**
5. **Updated “Electrical Characteristics” on page 126.**
6. **Updated package information for “20P3” on page 10.**
7. **Rearranged some sections in the datasheet.**

Changes from Rev. 1477D-05/03 to Rev. 1477E-10/03

1. **Removed Preliminary references.**
2. **Updated “Features” on page 1.**
3. **Removed SSOP package reference from “Pin Configuration” on page 2.**
4. **Updated V_{RST} and t_{RST} in Table 16 on page 32.**
5. **Updated “Calibrated Internal RC Oscillator” on page 28.**
6. **Updated DC Characteristics for V_{OL}, I_{IL}, I_{IH}, I_{CC} Power Down and V_{ACIO} in “Electrical Characteristics” on page 126.**
7. **Updated V_{INT}, INL and Gain Error in “ADC Characteristics” on page 129 and page 130. Fixed typo in “Absolute Accuracy” on page 130.**

8. Added Figure 106 in “Pin Driver Strength” on page 146, Figure 120, Figure 121 and Figure 122 in “BOD Thresholds and Analog Comparator Offset” on page 155. Updated Figure 117 and Figure 118.

9. Removed LPM Rd, Z+ from “Instruction Set Summary” on page 7. This instruction is not supported in ATtiny26.

Changes from Rev. 1477C-09/02 to Rev. 1477D-05/03

1. Updated “Packaging Information” on page 10.

2. Removed ADHSM from “ADC Characteristics” on page 129.

3. Added section “EEPROM Write During Power-down Sleep Mode” on page 19.

4. Added section “Default Clock Source” on page 25.

5. Corrected PLL Lock value in the “Bit 0 – PLOCK: PLL Lock Detector” on page 74.

6. Added information about conversion time when selecting differential channels on page 97.

7. Corrected {DDxn, PORTxn} value on page 43.

8. Added section “Unconnected Pins” on page 46.

9. Added note for RSTDISBL Fuse in Table 50 on page 108.

10. Corrected DATA value in Figure 61 on page 116.

11. Added WD_FUSE period in Table 60 on page 123.

12. Updated “ADC Characteristics” on page 129 and added Table 66, “ADC Characteristics, Differential Channels, T_A = -40°C to 85°C,” on page 130.

13. Updated “ATtiny26 Typical Characteristics” on page 131.

14. Added LPM Rd, Z and LPM Rd, Z+ in “Instruction Set Summary” on page 7.

Changes from Rev. 1477B-04/02 to Rev. 1477C-09/02

1. Changed the Endurance on the Flash to 10,000 Write/Erase Cycles.

Changes from Rev. 1477A-03/02 to Rev. 1477B-04/02

1. Removed all references to Power Save sleep mode in the section “System Clock and Clock Options” on page 22.

2. Updated the section “Analog to Digital Converter” on page 94 with more details on how to read the conversion result for both differential and single-ended conversion.

3. Updated “Ordering Information” on page 9 and added QFN/MLF package information.
