## "NASBIS" Insulating Sheet

## Type: **EYGY/EYGN**

"NASBIS" is a heat insulating sheet, which is composed of silica aerogel and fiber sheet, created through impregnation process. Pore size of silica aerogel is 10 to 60nm, which means it has smaller space than the mean free path of the air, 68nm. Air molecules do not collide against each other inside the pores, and thus the component shows excellecnt heat insulation performace.

Furthermore, combining NASBIS and PGS Graphite Sheet enables controlling the direction of heat. Composite type provides greater heat insulating performance.

#### Features

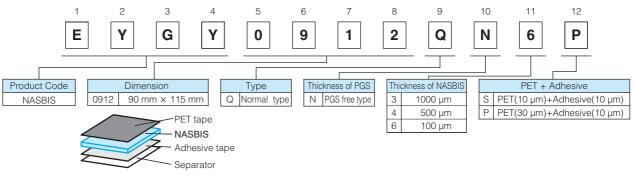

- Low thermal conductivity : 0.020 W/m · K typ.
- Created thin-film sheet ; Thickness : 100 µm to 1000 µm
- Various proposals are available when combined with PGS Graphite sheet
- RoHS compliant

#### **Recommended applications**

Smartphone, Wearable equipment, Digital Still Camera, Notebook PCs, Tablet PCs
