ALD-514012PJ134

DC-DC Converter for LC Panels with LED Backlights

Features

- ●Five Outputs
- Low profile and compact
- High efficiency
- Usable in a wide range of temperatures
- Applicable panel size: 10 to 19 inches (rough guide)
- Combined use of PWM modulated light and analog modulated light (ADIM) assures universality
- Equipped with load (LED) open detection (alarm output) function

Applications

ALD-514012PJ134 Specifications (Please refer to each specification before use)

■ Conformity to RoHs Directive

This means that, in conformity with EU Directive 2002/95/EC, lead, cadmium, mercury, hexavalent chromium, and specific bromine-based flame retardants, PBB and PBDE, have not been used, except for exempted applications.

^(*1) When output is open, the output voltage of that series is restricted, and other series operate normally.

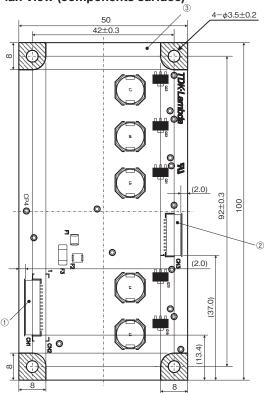

^(*2) See "Connections" as well as "Analog Modulation Light (ADIM) and PWM Modulation Light" for details about modulation light.

^(*3) See "Connections" for details about alarm output.

^(*4) These dimensions are indicated the maximum only H. Others are typical values.

Component and pattern prohibited area (GND line excluded)

When securing LED driver, check to make sure crowns and plates (including uneven parts) fit inside the above prohibited areas (diagonal lined areas).

Connections

RL1 to 4: Load resistance (15W min.)

Operate by ON-OFF of SW1 as follows.

| SW1 | Unit operates | |
|------|------------------|--|
| а | Operates | |
| b | Does not operate | |
| Open | Does not operate | |

Operate as follows by switching a SW2.

| SW2 | Unit operates |
|-----|---|
| а | Voltage dimmer Vbr=0 to 2.5V (0V : Maximum brightness) |
| b | Volume dimmer VR=0 to $50k\Omega$ (0 Ω : Maximum brightness) |

Measuring Instruments

(V): DC voltmeter (ADVANTEST R6452A equivalent)

(A): DC ammeter (ADVANTEST R6452A equivalent)

F : Frequency counter (ADVANTEST R6452A equivalent)

Protection Circuit Operation

| Load condition | Alarm output (CN1-14) | With or without latch |
|------------------|--------------------------|-----------------------|
| Stationary | 0.5V max. | No latch |
| 1 output open | 4.5V min. | No latch |
| All outputs open | 4.5V min. | No latch |

Alarm output Vst may be output when there is excessive ON/OFF of Vin and Vrmt.

Analog Modulated Light (ADIM) and PWM Modulated Light Combination Example

Determines maximum value for output current in analog modulated light, to enable brightness control at that range, using PWM modulated light.

- <Modulated Light Example 1 (gray in diagram below)>
 - Set output current value to 100%, in cases where PWM modulated light is desired at a modulated light range of 100% to 0%
- <Modulated Light Example 2 (black in diagram below)>
 - Set output current value to 50%, in cases where PWM modulated light is desired at a modulated light range of 100% to 0%

Analog modulated light is the modulated light system for changing current amplitude. The benefits this system offer are that low frequency noise hardly occurs because it does not have an intermittent action and input power source load is small because input current variation is small. Conversely, because it changes the LED action point, chromaticity varies according to the modulated light.

PWM modulated light is the system where intermittent actions are made at low frequency in the range of 100kHz to 1kHz, and this on duty is varied to modulate light. Although this system leaves concern about low frequency noise and the demand for excessive answering to accommodate input power source, it offers the benefit of small chromaticity variations according to the modulated light because the LED action point does not change. PWM modulated light comes in two forms: a built-in PWM modulated light system (this is inside the LED driver generating chopping and sawtooth waves, which are compared against the external DC voltage to form a modulated light pulse) and an external PWM modulated light system (this directly applies the pulse from outside to modulate light).

The ALD Series combines analog modulated light and PWM modulated light to enable the generation of modulated light that suits your needs.
